

*Company Name: Aaydot Ltd*

*Project Name: MyGap Platform Specification*

*Funding: Innovation Voucher*

Aaydot is a startup company based in Co. Wexford.

### PROBLEM TO BE SOLVED

Aaydot describe this first product, MyGAP™, as “the world’s new digital address system. In the future, MyGAP™ will identify, with far greater accuracy, your current address. Effectively, with MyGAP™, delivery companies can achieve that all-important ‘end mile’ delivery with pinpoint accuracy - saving time, money, and making customers happy. Its global release and diffusion will result in increased profitability for online retail and delivery companies, and higher levels of simplicity, accuracy, and customer satisfaction.

### HOW GATEWAY DELIVERED SOLUTION FOR INDUSTRY

TSSG analysed the proposed GoGeek platform and the associated mobile app, MyGap to:

- 1.1. Detail appropriate software architecture. Having reviewed the core functional modules in the proposed platform, TSSG will identify and describe the optimal software elements and components required to achieve a stable, high performance platform.
- 1.2. Identify software challenges to realisation. Having specified the individual software components required for the platform, TSSG evaluated the proposed components from the perspective of interconnectivity, especially data sharing, to identify any challenges that will need to be overcome to achieve an effective platform.
- 1.3. Suggest emerging software approaches. Given such a large, multifunctional platform, TSSG researched alternative approaches to developing the platform. The results from the research will be delivered to Aaydot Ltd. in the medium of a formal report.

### IMPACT FOR THE COMPANY

The report provides Aaydot with an overview of what’s is feasible and the challenges it will need to overcome to achieve a state of the art platform.
