

Company Name: OneStream
Project Name: OneStream Web Casting Application Investigation
Funding: EI Innovation Voucher

OneStream is a video streaming and video content distributor for learning organisations including the Law Society, the IMI and the SCSL. OneStream technology provides the means for these organisations to stream their courses live so that their lectures are available online, on-demand and on the Onestream.tv app.

**PROBLEM TO BE SOLVED**

The goal of this work was to take the existing android application and investigate the possibility of developing a platform to allow for the application to be customised based on individual clients requirements.

**HOW GATEWAY DELIVERED SOLUTION FOR INDUSTRY**

The existing application code for the apps were made available to mobile services and the team examined the code to determine the complexity of the existing code base and the effort needed to meet the client's requirements. The output of the work was a report the documented the existing complexities and additional infrastructure required to meet the requirements.

**IMPACT FOR THE COMPANY**

The report gave OneStream the information they required to objectively decide if the proposed design was possible and also formed the basis of a follow on matched innovation voucher proposal.
